Choose the Canvas Frame size you desire from the left hand column. (The middle column has the equivalent metric sizes). Read across to the Cropped Image Size column and use the metric sizes given here as the basis for the finished cropped size for your canvas.

Remember that unless you ask to do otherwise, approximately 36mm from each side will be wrapped down the sides, top and bottom of the canvas wrap. Ensure then that you do not place important features in the image in these areas. (SEE IMAGE BELOW)

Once you have cropped your image to the ratio given, make sure you save it. Do not forget to embed the colour space you are working in preferably sRGB.

You may upload your image via our File Upload facility on our website.
